B2W SOFTWARE

Dispatch
RESOURCE PLANNING & DISPATCHING ELEMENT

KEY BENEFITS

- Provide efficient management of employees, equipment, trucking and materials

- Increase productivity with instant and accurate information

- Reduce equipment idle time and unnecessary rental costs

- Accurately track employees and equipment

- Utilize one shared database for single point resource data entry

FEATURES

- Job Board

- Interactive Map

- Real-time Traffic & Weather

- Assignment of Moves to Drivers & Equipment

- Trucking & Material Delivery Management

- E-mail Report Subscriptions

- User Security

- **AND MORE**

Plan for profitability

The logistics of managing a major construction project can be overwhelming. B2W Dispatch simplifies your operations, allowing you to plan, analyze, schedule, and dispatch your human, mechanical, and material resources across job locations and over time. B2W Dispatch features advanced interactivity, allowing users to perform complex assignment, scheduling, and transportation tasks intuitively, accurately and efficiently. When jobs run the way you plan them, profitability is assured.

Know where your equipment is, and where it's going

B2W Dispatch's Move function allows you to schedule and dispatch equipment to and from job sites and other locations. You can view all drivers and transport equipment in a single pane and instantly schedule moves using drag and drop. Moves are easy to complete on screen—assign multiple moves to a single driver on a given day, create custom moves, provide a specific time or a date range for moves to occur, or update the location of equipment in the system. Plus, daily drivers reports help you see what's going on at all times.

Get a real-time geographic view of sites and resources

B2W Dispatch's Map function lets you easily see where your job sites are in relation to each other, and find the best resource for each job based on proximity. Move locations and update their coordinates for better accuracy; edit or delete assignments; and even drag and drop between two different locations. Integration with Microsoft's Bing Maps provides real-time traffic, accidents, road construction delays, and weather radar, so you'll always know what's going on at your job sites.
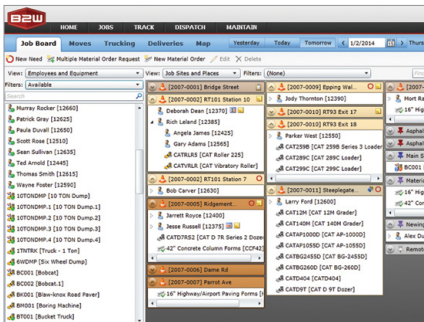

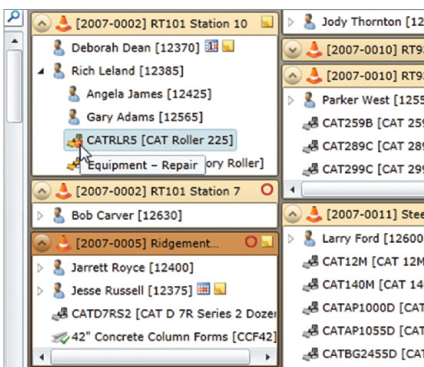

JOB BOARD

Instantly schedule and move available resources via drag and drop, or schedule equipment and employees to be at a specific job for a specific date range.

NETWORKED WITH B2W TRACK & MAINTAIN

Create new field logs using information from B2W Dispatch. Plus, when equipment is scheduled for maintenance or repair, its status is automatically flagged and updated in B2W Dispatch.

Schedule your resources for optimal efficiency

B2W Dispatch's Job Board puts all your job sites and resources in a single view for greater efficiency when planning job assignments. This intuitive, interactive view provides the dispatcher with all necessary information to proactively manage day-to-day scheduling. Easily schedule employees, equipment and materials; filter them to find the right available resources for job needs; and instantly assign resources using drag and drop. You can schedule resources for date ranges, and quickly adjust schedules as site requirements change. You can even add date-specific events to locations or resources, such as memos, vacation, or medical occurrences.

Deliver materials where and when you need them

B2W Dispatch's Trucking and Delivery functions make it easy to create and schedule material trucking orders, and configure your trucking requirements to ensure that materials are always delivered when and where they're needed. Add multiple material orders to your site with one dialog; assign resources from your own, rented or subcontracted trucks to a single order; manage drivers and deliveries from a single pane, using drag and drop to create assignments; use daily drivers reports to keep everyone up to date. You can specify material quantities by location, then easily complete deliveries on screen. Your data is always accurate and up to date.

THE B2W SOFTWARE ADVANTAGE

Designed and built on the ONE (Operational Networked Elements) platform, B2W is the first and only suite of construction management solutions that puts everyone in your company—from managers in the office to foremen in the field—on the same page at the same time. Separately or as one unified suite, B2W Estimate (estimating & bidding), B2W Track (field tracking & analysis), B2W Dispatch (resource management & dispatching) and B2W Maintain (equipment maintenance & repair management) offer:

- Increased operational efficiencies and accuracy for more profitable jobs
- One operational database for single point data entry that enables instant cross module resource visibility and collaboration
- Operational control through real-time dashboards with easy drill downs
- Comprehensive integration with all major accounting software packages
- Advanced capabilities between the field and the office via tablet application
- Intuitive user interface for streamlined estimating, bidding, logistics, field operations and maintenance
