

SOFTWARE

B2W ESTIMATE

ESTIMATING & BIDDING
Features Overview

B2W Software empowers and inspires heavy civil construction companies to win more work and complete it more profitably. The company's ONE Platform connects resources, workflows and data and includes advanced, unified elements to manage estimating, scheduling, field tracking, equipment maintenance, data capture and business intelligence.

B2W Estimate provides centralized cost data and structures along with specialized functionality for heavy civil construction estimating and bidding. Leveraging the intuitive, easy-to-use application, companies maximize accuracy and speed, standardize estimating processes, focus more attention on strategy and win more bids at better margins.

WIN MORE BIDS AT BETTER MARGINS

- Central database with up-to-date labor, tasks, materials and equipment costs
- Specialized functionality for creating bids from databases, templates and cost structures
- Easy to learn and deploy, with familiar, intuitive user interfaces and construction estimating logic
- Scalable, enterprise-class performance

SOFTWARE

General

B2W Estimate may be purchased in one of three editions (Basic, Professional, and Enterprise) depending on your company's needs.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Shared License Pool	A shared license pool allows one set of licenses to be shared among all users tying into a particular server, even if they are using different Resources/ Estimate databases.			✓
Multiple Database Support	Support for multiple databases on a single server allows support for multiple regions or corporate divisions without purchasing additional hardware.			✓
Advanced Estimate Security	Assigning permissions to user groups allows control over creation, modification and deletion of estimates.			✓
B2W Management Reporting	The browser-based B2W Management Reporting allows you to run powerful business intelligence reports, across all the estimates in your database, or even multiple databases. See your average cost for materials over the past year, see the win-loss ratio of your estimates and your margins over time. Also, subscribe to reports for automatic e-mail distribution on a defined daily, weekly, or monthly schedule.			✓
Review Historical Changes with the Audit Trail	The audit trail capabilities within B2W Estimate allow you to review a detailed history of changes made within each estimate. B2W Estimate tracks the date and time when components are added to, modified or deleted from an estimate, and records the name of the user who made the changes. When values such as unit costs or production rates are modified—either at the component level or via global edits— B2W Estimate records the previous values, creating a detailed event log for each portion of your estimate.			✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Saved Displays	Save your display configuration settings on the Item Listing, Estimate Detail, and Item Pricing grids. Create as many Saved Displays as you need. Share Saved Displays with the other B2W Estimate users. Recall existing Saved Displays by selecting them from a convenient drop-down list.			✓
Tags	Create an unlimited number of tags which may be assigned to Resources, Item Templates, and items and cost components within an estimate. Estimate items and components may be grouped or filtered by their tag values, and as an added bonus, items appearing on the private bid form may also be grouped and subtotaled by their tag values. Since this is a user defined feature, you can create as many tags as needed with relevant names for your requirements.		✓	✓
B2W Mobile Estimating	B2W Mobile Estimating allows estimators to disconnect from the office server and continue to use the program on the road. You can check out estimates, still have access to all your resources and items, and make new estimates. When you return to the office simply re-connect and estimates you created while disconnected are added to the server. B2W Mobile Estimating is ideal for companies that want the flexibility to work on the road, or to download the bid locally from a remote server for closing during bid day.		✓	✓
User-based Security	Assigning permissions to user groups allows control over creation, modification and deletion of information throughout resources and Item Databases. This gives the administrator complete control over which users may modify information.		✓	✓
Estimate Folders	The ability to create estimate folders not only allows for better organization and quicker estimate lookup, but also sets the stage for B2W Estimate's advanced estimate security features.		✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
File Attachments	Attaching files directly to your estimate means that important documents – such as project specifications, blueprints, or jobsite photos – are always at your fingertips. You can also attach links to external information such as a link to a file somewhere on the network, a link to a folder, or even a link that brings you to a website.		✓	✓
Find & Replace	B2W Estimate allows you to locate and step through all instances of a specific cost component throughout your current estimate. Labor, equipment, materials and miscellaneous cost components may be replaced with a different cost component of the same type – either all at once or one at a time – throughout your current estimate. In addition to finding/replacing cost components throughout your entire estimate, B2W Estimate's Find and Replace feature also works within smaller portions of your estimate. For example, you could perform a find and replace operation within a specific work type or phase, or even within a specific bid item.	✓	✓	✓
Undo Deletions	B2W Estimate allows you to restore recently deleted data such as estimate items, tasks or even entire estimates.	✓	✓	✓
Archive Estimates	Older estimates may be removed from your B2W Estimate database and archived within a separate SQL database, allowing for better use of storage space, organization, and performance.	✓	✓	✓
Conditional Formatting	B2W Estimate allows you to create one or more rules which alter the appearance of specific rows on the Item Listing or Item Pricing tabs based on criteria that you specify on a per-rule basis. For example, you might want to do one or more of the following: Use a special background color for items with a specific work type. Use bold font for items without an assigned subcontractor. Use red font for items with a markup % of less than 3%.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Support For Windows Regional Settings	The currency, date, time and number formatting for the selected Windows locale is applied to all values in B2W Estimate, including the appropriate currency symbol for currency values. This formatting information is used both on-screen and in reports.	✓	✓	✓
Integrated Windows Security	Each user account may be tagged with a Windows domain account, allowing automatic user authentication without seeing a login screen at program startup. This prevents users from having to remember yet another user name and password, while preventing unauthorized users from accessing the estimating system.	✓	✓	✓
Administration Tool	A separate administration application allows the administrator to configure user and group account information and view licensing information without consuming a user license.	✓	✓	✓
Online Banking	Microsoft SQL Server's online backup functionality allows a system administrator to backup the B2W databases even when estimators are using the application.	✓	✓	✓
High Availability Installations	Microsoft SQL Server's support for high availability configurations – including failover clustering, backup servers, log shipping, etc. – allows system administrators to enhance the reliability of the B2W Estimate server based on your company's requirements.	✓	✓	✓
Microsoft SQL Server Included for Up to 10 Users	The installation program automatically installs and configures Microsoft SQL Server Express Edition if configuring a server for ten users or less, preventing you from having to purchase Microsoft SQL Server for smaller installations.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Easy Terminal Services/Citrix Installation	The installation program configures B2W Estimate for all Terminal Services users, placing an icon on their desktop, without any further steps necessary to make the application available to each user.	✓	✓	✓
Recently Opened Estimate List	B2W Estimate displays the last eight estimates you've opened on the Home Page, as well as the File menu. This allows you quick access to the recent estimates you've opened in a way that's familiar to all Microsoft Office users.	✓	✓	✓
Open Multiple Estimates	Open more than one B2W Estimate window at the same time: view Resources and an estimate, multiple estimates, or even multiple views of the same estimate all at once with the use of only one license.	✓	✓	✓
Roam User Settings	User interface settings — such as dialog size and location, decimal place settings, etc. — are stored within each user account on the B2W Estimate server. This allows these settings to “roam” with the user, regardless of which computer they use to log on.	✓	✓	✓
Extensive Online Reference Information	B2W Estimate includes complete reference information in its online help system. Click the Help button or press F1 anywhere in the application to see detailed reference information.	✓	✓	✓
Client/Server Architecture	B2W Estimate was designed from the ground up to take advantage of the very latest development tools from Microsoft — .NET and SQL Server. This gives you the very best in performance, functionality and scalability.	✓	✓	✓
Microsoft Design Standards	The user interface adheres to the guidelines for user interface design contained in the Microsoft Windows design guide. This means B2W Estimate has the same look and feel as the Microsoft Office applications you're used to.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Open Estimate Dialog	The Open Estimate Dialog lists all estimates in your B2W database. Filter by Estimator, Estimate Status, Primary Customer and Estimate Type.	✓	✓	✓
Spellcheck	You can check the spelling of items, tasks, WBS levels and other cost components as well as text that appears on the bid form and RFQs using the new spell check functionality.	✓	✓	✓
Bid Schedules	Capture information for bids that you may choose to estimate. Includes a Bid Schedule Calendar. Convert bid schedules to estimates. New estimates will be populated with the bid schedule information fields you filled out.			✓
Efficiency Factors	Use Efficiency Factors to retain historical crew production rates as part of your estimating process and gauge how quickly a crew can complete an assigned task.	✓	✓	✓
Custom Properties in Estimates	Define your own custom properties and add them to a form (template) and configure however you choose. Gather specific information for an estimate, such as email addresses and phone numbers, checklists for tracking completion of tasks, projected costs, and more.			✓
Import Bid Schedules	Import multiple bid schedules from an Excel file rather than entering them by hand.			✓
Copy and Paste Components in an Estimate	Use the CTRL-C and CTRL-V or options on the right-click menu to copy and paste cost components to new locations.	✓	✓	✓
Remember User Settings in the Add Components Dialog	Sorting and filtering selections made in the Add Components dialog in an estimate are saved on a per-user basis, whether the dialog is closed and reopened, the user opens a different estimate, or the application is restarted.	✓	✓	✓
Specify Displayed Labor Rate Classes in Estimates	Specify which labor rate classes to display for each estimate, making it easy to choose the correct labor rate class.	✓	✓	✓

SOFTWARE

Resources & Item Template Setup

The Resources area of B2W Estimate is the backbone of the estimating system. In Resources resides all of the information you use to form the cost basis of your estimates. It also includes crew templates and task templates that allow you to assemble reusable cost structures. In addition, Resources serves as a storage area for organizational information such as your customer lists, engineers/architects, subcontractors, and vendors.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Item Database	Unlimited private and public Item Databases support building cost structures right in each item, termed an “item template.” When you pull the item into an estimate, the entire cost structure is pulled in with it.	✓	✓	✓
Centralized Resource Database	A centralized resource database — including labor, equipment, crews, materials, etc. — allows all estimators to work with the same standard cost information, as well as standard cost structures created by your estimating managers.	✓	✓	✓
Save Estimate Items, Tasks, or Crews Back to Resources	Save estimate items, tasks, or crews back to the Resources area for use in future estimates. Or, if you prefer, you may even choose to save your estimate items as task templates in Resources.	✓	✓	✓
Rate Classes	Labor and equipment rate classes allow you to store unlimited rate tables for your labor types and equipment types.	✓	✓	✓
Import Resources	B2W Estimate allows you to copy resource information to Excel, manipulate the data, and then import your changes back into B2W Estimate. Brand new resources may also be added to B2W Estimate in this fashion.	✓	✓	✓
Associated Equipment Operators	Equipment can have an operator linked to it so the operator is automatically pulled into the estimate whenever the equipment is used.	✓	✓	✓
Address Book	Customer, subcontractor, vendor and engineer/architect lists allow you to manage addresses for the companies you deal with.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
E-mail and Web Hyperlinks	Wherever Web page addresses or e-mail addresses appear in B2W Estimate, hold down the CTRL key and click to navigate to the Web site or create a new e-mail message for the contact.	✓	✓	✓
State DOB Database	B2W Estimate provides over 90 pre-packaged lists of DOT items that seamlessly integrate with the program, at no additional charge.	✓	✓	✓
Weights and Dimensions	Record weights and dimensions for materials and equipment in Resources and an estimate. There is an option for calculated Indirects that will calculate costs based on total weight or volume of materials and equipment in an estimate.	✓	✓	✓
Import Weights and Dimensions	Specify weight and volume values for your materials and equipment when importing or updating those resources with the Import Resources Wizard. You can map data from your import file to weight and volume values.	✓	✓	✓

SOFTWARE

Costing

Some of the most powerful features found in B2W Estimate relate to costing. The flexibility and detail around costing in B2W Estimate gives estimators the ability to create estimates in the way that works the best for them.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Work Breakdown Structure (WBS)	Work Breakdown Structures allow you to organize and develop your estimates in an unlimited hierarchical form that matches your business needs. It gives you visibility into how costs are rolled up and the level of detail at which costing is done. Estimates can be configured to support pay items, WBS levels, or both together.			✓
Summations	As part of Work Breakdown Structure, you can select Calculate as a summation as a method for setting a selected value within WBS Levels.			✓
Cost Groups	Cost group functionality allows users to group like items and tasks, and then utilize a similar cost structure for all of them. This functionality adds even more flexibility and works with the way estimators really think about job costing; saving time and money in the end.			✓
View Item History	View historical information about how an item has been bid in the past. You may view histories for pay items, as well as for indirect items.			✓
Work Rules	The Work Rules feature allows you to configure, name and store multiple combinations of production hours, equipment hours and labor hours per day. Labor hours per day are broken down into regular, overtime and double time. These work rules may be assigned to the crew template, and overridden for individual labor and equipment in the crew template.		✓	✓
Suppressed Items and Tasks	Suppress items or tasks within your estimates to “turn off” their cost, in order to view “what if” costing scenarios.		✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Calculated Cost Method	A “Calculated” cost method allows you to calculate the cost of an indirect item as a percentage on direct cost categories. You can then classify the result as a specific category, such as Equipment Owned, Labor Base, etc.		✓	✓
Comparison Cost Method	The “comparison” cost method gives you the ability to compare self performed unit costs with subcontractor quotes. This is useful when you have the option to self perform certain work, but also want to compare your unit costs with prices submitted to you by various subcontractors.		✓	✓
Integrated Vendor and Subcontractor RFQ Management	Perform powerful analysis on subcontractor and vendor quotes with B2W Estimate’s integrated RFQ Management system. Automatically fax or e-mail RFQs to subcontractors and vendors, then perform powerful analysis on submitted quotes. Select the lowest bidder—or split RFQ groups among multiple bidders—to get to the lowest possible package price.		✓	✓
Unlimited Cost Structure	B2W Estimate’s renowned tree view allows you to create estimates with virtually unlimited levels of detail: items, tasks, sub-tasks, sub-sub-tasks, etc.	✓	✓	✓
Task & Crew Template Previews	The Add Components dialog allows you to preview the structure of a crew template or task template before it is added to an estimate.	✓	✓	✓
Fuel Costs Stored With Equipment Rate Classes	Fuel costs are stored on a per-rate class basis, allowing you to configure the fuel costs specific to each individual equipment rate class.	✓	✓	✓
Drag & Drop Within Estimates	Drag and drop items and cost components within the tree view to move, reorder and copy.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Drag & Drop Between Estimate	Drag and drop items and cost components between estimates.	✓	✓	✓
Assign Notes to Any Part of the Estimate	Enter unlimited notes on any part of your estimate—item, task, crew, material, etc. Each note is tagged with the initials of who entered it, along with the time and date.	✓	✓	✓
Estimator Field	This field accepts a manually-typed estimator name, or you may select an estimator from a drop-down list of B2W Estimate users. This field is used for filtering purposes in the Open Estimate Dialog.	✓	✓	✓
Unlimited Minority Requirements	Enter an unlimited number of minority participation requirements. Track all subcontractor participation in order to track actual minority costs against goals.	✓	✓	✓
Duplicate Estimate	Make a duplicate copy of an estimate while you're viewing it. Right-click the estimate in the Open Estimate dialog, or simply click the File menu, then choose Duplicate to make an exact copy.	✓	✓	✓
Support for Indirect or Incidental Costs	Establish an indirect cost total for the estimate, using either individual indirect items or percentages. Distribute the indirect cost into pay items in a manner you specify.	✓	✓	✓
Over 130 Item Listing Columns	More than 130 columns are available in the item listing spreadsheet view. This view is completely customizable, allowing you to show, hide, resize and reorder the columns.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Grouping of Items	Group items by work type, alternate, tags, or phase on both the spreadsheet view and detail view of the estimate. Each group shows rolled-up totals for the items it contains.	✓	✓	✓
Customizable Multi-Level Grouping	Create your own system wide or estimate specific groups. Combine multiple criteria to create nested groups or filters. For example, group an estimate first by phase and then within phase, by work type and then finally by a tag. Groups and filters can have unlimited levels and can be used to create the bid form.	✓	✓	✓
Full Metric/Imperial Support	Enter values in either metric or imperial anywhere in the program and B2W Estimate automatically converts them when you switch systems using built-in conversion factors. Reports are automatically printed in the currently selected system.	✓	✓	✓
Extensive Filtering	Filter items within estimates by alternate, cost method, flagged, lock type, phase, suppressed, with notes, work type, zero quantity, zero unit cost or zero unit bid price, estimator, tag, or multi-level filtering that combines these criteria to form a new customized filter.	✓	✓	✓
Tie Trucking to Crew Production	Drive trucking costs from crew production rates by linking trucking days and trucking hours per day to a crew.	✓	✓	✓
Global Rate Edits	Globally edit equipment, labor, crews, and materials at estimate, item group, item and task level.	✓	✓	✓
Error Check Wizard	The integrated Error Check Wizard automatically scans your estimate for dozens of common estimating errors. If any problems are found, the system steps you through each problem so you can review and resolve it.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Excel Integration	Load Microsoft Excel workbooks directly into B2W Estimate and link values from the workbooks into your estimate. This allows the use of customized calculations specific to your company.	✓	✓	✓
Custom Calculation Factors	Create user-defined calculation factors to allow quantities to drive other quantities. For example, convert the square yards of an item to drive a task created in tons using custom conversion factors.	✓	✓	✓
Crew Templates	Combine labor and equipment to create reusable templates for use when building estimates. Select from different production methods, including units per hour, hours per unit, etc.	✓	✓	✓
Copy Between Estimates	Open two estimates side-by-side, and drag and drop items and cost components between them. B2W Estimate allows you to automatically update the cost information to current rates.	✓	✓	✓
Flexible Overtime	Flexible overtime and double time configuration options allow B2W Estimate to calculate labor costs for you the way that you need.	✓	✓	✓
Bid Level Taxes	Enter multiple bid-level taxes to handle county tax, state tax, GST tax, etc.	✓	✓	✓
Bid and Takeoff Quantity	Enter both bid quantities and takeoff quantities and track over/under amounts using the Bid Versus Takeoff summary.	✓	✓	✓
Auto Price Rounding	B2W Estimate includes an option to automatically round pay item prices using a scheme you configure.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Owned and Rented Equipment	Equipment may be classified as owned or rented. Cost summaries reflect separate totals for each, and different markups can be applied to rented vs. owned.	✓	✓	✓
Instant Recalculation	Enter bid prices and cost information and instantly see updated cost and price information on-screen.	✓	✓	✓
Flexible Cost Methods	B2W Estimate supports multiple cost methods for items and tasks, to allow you to use the right level of detail. Plug allows you to plug a unit or total cost. Subcontracted allows plugging a unit or total cost, or soliciting quotes from subcontractors. Quick allows entry of unit or total costs for individual cost categories. Detail allows addition of cost components, including crews, materials, labor, equipment, trucking, and other tasks to break down the cost detail. Comparison allows you to create an item or task along side a detailed cost, and compare either to a subcontractor quote toggle whenever you want. The Calculated cost method is used for Indirect items and allows you to create the cost as a percentage of another cost category in the bid.	✓	✓	✓
Track Costing Related Comments	B2W Estimate allows you to enter comments for each item, crew, material, labor, equipment, etc. during the costing process. The comments dialog includes a full history, including the estimator's initials, date and time each comment was entered.	✓	✓	✓
Set Apportioning to any WBS Level	Set an apportioning scheme at any level in a Work Breakdown Structure.			✓

SOFTWARE

Bid Closing

Another strength of B2W Estimate is its bid closing capabilities. The process occurs on three tabs where values can be determined for bond, overhead, profit, and when you chose to use indirects. Choose the pay items where the previously calculated values are to be distributed, and specify a method of distribution to be used. Perform distribution, and make any necessary manual adjustment to your item prices.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Detailed Markup Capabilities	Mark up bids using broad or more granular methods. Use a single percent that applies to all costs, or break out by cost category and assign different mark up to labor instead of equipment or materials. Have default mark up settings, or change them to be bid specific.		✓	✓
Apply Markup by Phase, Alternate, or Work Type	Enter percentages to calculate indirect cost, overhead, or profit based on direct cost on a per-phase, per-alternate, or per-work type basis. This allows you to use a different set of percentages for the direct cost in pay items classified with a specific phase, alternate, or work type.		✓	✓
Apply Markup by Subcontractor	Enter percentages to calculate indirect cost, overhead, or profit on a per-subcontractor basis. This allows you to use a different set of percentages for the direct cost in all pay items, indirect items and tasks for each selected subcontractor.		✓	✓
Distribute Indirect Items Individually	Define an overall distribution strategy for indirect cost, but then override the default distribution settings on a per-indirect item basis. This allows you to customize the distribution of specific indirect items.		✓	✓
Fax and E-mail Proposals	Automatically fax or e-mail proposals to customers.	✓	✓	✓
Bond Tables	B2W Estimate supports creation and management of multiple bond tables, including a default bond table for new estimates.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Flexible Price Locking	Lock an item by its unit price, by its margin or markup percentage so that future distributions do not affect the item price you've chosen.	✓	✓	✓
Calculate Item Price as Percent of Total Bid Price	A special type of price lock allows you to have B2W Estimate calculate the price of a pay item as a percentage of the total bid price. This is helpful for allowance items that may not exceed a certain percentage of the price.	✓	✓	✓
Bid vs. Takeoff Analysis	Analyze the cost, price and markup difference between bid quantity and takeoff quantity both on screen and in reports.	✓	✓	✓
Real-Time Bid Modeling	The Bid Pricing Strategy tab allows you to model the bid. A real-time pricing summary is displayed, allowing you to make modifications to markup percentages, bond table configuration and bid-level taxes, and instantly see the impact of the change.	✓	✓	✓
Adds/Cuts	Add or remove money from the bid in a single location, and apply it to the cost category of your choice. Take \$10,000 off labor, or add \$25,000 to your materials without having to go and change individual components or items. Choose how and which parts of the bid receive the add or cut and determine if the adds/cuts happen before or after mark ups are applied.	✓	✓	✓
Link Estimate-Level Bid Closing Values to Excel Workbook	Link Total Indirect Cost, Total Overhead, or Total Profit to an Excel workbook cell. This allows you to create customized or proprietary calculation schemes for these bid-level values.	✓	✓	✓
Default Closing Items Selection	Select a default item or group of items to distribute a "leftover" bid price value, resulting from rounding and price balancing.	✓	✓	✓

SOFTWARE

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Over 130 Item Pricing Columns	More than 130 columns are available in the item pricing spreadsheet view. This view is completely customizable by you, allowing you to show, hide, resize and reorder the columns.	✓	✓	✓
High-Precision Unit Bid Prices	B2W Estimate supports adjustable precision for unit bid prices, out to six decimal places.	✓	✓	✓
Custom Bid Form Layout	Customizable bid form generation allows you to generate detailed unit price or lump sum bids with grouping and subtotaling options.	✓	✓	✓
Rich Text on Bid Forms And RFQs	B2W Estimate now allows you to utilize many common varieties of advanced text formatting – including bullets, underlines, boldface, and italics – on your bid forms and requests for quotes. This gives you a great deal more flexibility in creating payment terms, bid form notes, subcontractor RFQ notes and vendor RFQ notes with a professional appearance.	✓	✓	✓
Signature Image on Bid Form	Upload an image of your signature and have it print together with one selection.	✓	✓	✓

SOFTWARE

Reports

B2W Estimate is pre-packaged with a variety of estimate reports that allow you to print detailed documentation of all aspects of the estimating process, including item and estimate summary reports, and cost detail reports.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
Print Over 100 Estimate & Resource Reports	Reports can be printed for the entire estimate, an item group, specific item, or a single task.	✓	✓	✓
Print Reports in Metric or Imperial	All reports except bid forms are printed in the current system of measure selected in the application. This allows you to analyze cost information in either metric or imperial.	✓	✓	✓
Send Report to Printer Without Previewing	The Print dialog supports sending a report directly to the printer without previewing it first.	✓	✓	✓
Table of Contents in Reports	Many reports support the display of a table of contents, allowing you to quickly navigate to different parts of a report. For example, the Cost Detail report allows you to quickly navigate to a specific item.	✓	✓	✓
Support For Custom Company Logo Header	Import a graphic for use as the header for reports from any of the following formats: BMP, EMF, GIF, JPG, PNG, TIF, or WMF. This allows you to create a custom graphic, including your company logo for printing on all reports.	✓	✓	✓
Support For Multiple Companies	If your organization prints reports and submits proposals under multiple company names, simply select the appropriate company for each estimate and all reports will print using the selected company information. Each user can assign a default company for his reports and bid forms.	✓	✓	✓
Web Download of New Reports	B2W Estimate creates new standard reports based on customer demand. Download new standard reports directly from the B2W Estimate support site and add them to your system.	✓	✓	✓
Report Bundles	Create collections of estimate reports that you can print together with one selection.	✓	✓	✓

SOFTWARE

Integration

B2W Estimate was built and designed to integrate with state DOTs, industry leading accounting and project management solutions and even Microsoft Excel. Plus B2W Estimate is networked with our B2W Operational Suite allowing the ability to compare job site performance against estimated costs in real-time.

FEATURE	DESCRIPTION	BASIC	PROFESSIONAL	ENTERPRISE
B2W Operational Suite and B2W Estimate Networked	Quickly transfer estimated jobs from B2W Estimate directly into the B2W Operational Suite.	✓	✓	✓
Excel Import/Export	Import and export pay items from and to Microsoft Excel.	✓	✓	✓
DOT Integration	B2W Estimate provides integration with state DOT electronic bidding system (EBS) files. Download a job from your state's Web site, (where supported) and import the bid into B2W Estimate automatically. Once you've priced the job, export it for submission to your state. (1)	✓	✓	✓
Export to Project Management and Accounting	B2W Estimate supports exporting detailed cost estimate information to project management and accounting systems such as Microsoft Project, Primavera, Viewpoint, Cheetah, Timberline, Dexter & Chaney and many more.	✓	✓	✓
Instant Online Help For Each Import/Export Format	Each import/export add-in includes an online help file that is embedded with the add-in. This allows you to access the latest documentation in electronic format.	✓	✓	✓
Enhanced AASHTO EBS Compatibility	B2W Estimate's AASHTO EBS import add-in eliminates the need to adjust the options in the EBS software to only include a limited number of fields in the CSV file. B2W Estimate scans the fields in the file and uses those that it needs. The export process includes the default columns expected by the EBS software in the export file, eliminating the need to change the default import settings in that program.	✓	✓	✓

(1) Where supported.
